

ORANGUTANS ARE GOING EXTINCT

These animals are one of the biggest monkeys.

The name orang-utan means "man of the forest."

Orang-utans are well known for their red fur.

These monkeys are highly intelligent and the closest relative of humans.

ORANGUTAN'S HABITAT AND DIET

HABITAT

- Sadly, orangutans live a solitary existence.
- They make homes in trees and mainly use it for sleeping.
- These cheeky animals mostly live in Sumatra and Borneo in Southeast Asia.

DIET

- An orangutan's diet is made up of a variety of foods.
- These foods are: Flowers, bark, insects, leaves and mainly fruit.

Fun Fact

Male orang-utans
are actually bigger
than females

WHY ORANGUTANS ARE ENDANGERED

Orangutans are suffering from habitat loss, which is affecting them heavily. This is because of our need for paper.

We chop down trees for paper which is destroying their homes. We sometimes use the trees for palm oil so we should stop using products that contain this.

THANK YOU FOR WATCHING

To donate to help orangutans go to wwf.uk.org to adopt an orangutan
